

Free Lists California State Listed, Federally Listed and Sensitive Animals and Plants

The California Department of Fish and Game maintains lists of endangered, threatened, rare and special status animals and plants which are available by accessing the Fish and Game webpage: <http://www.dfg.ca.gov/endangered/>

Hard copies of these lists are available free from the California Natural Diversity Database, 1807-13th Street, Suite 202, Sacramento, CA 95814 or call 916 324-3812.

Free Lists Available from the License and Revenue Branch GUIDES – GAME BREEDERS

You can obtain free lists of California licensed guides, including big game hunting guides, bird hunting guides, fishing guides and others, including back packing and photography guides. If you are planning a trip in California, this list will give you access to experienced anglers and hunters to help make your trip enjoyable and successful.

There is also a list of licensed domesticated game breeders who have stock for sale.

To order your list, contact the DFG customer service desk at 916 227-2271; or you may access these lists yourself on the Fish and Game webpage, at www.dfg.ca.gov/licenses/.

Featured on the cover of this years' Fishing Regulations; Kevin Jarrett, a fishing guide from Citrus Heights, displays this 46-pound salmon he caught on the Feather River in 1998.

FISH AND GAME

The California Natural Diversity Database

The Natural Diversity Data Base (NDDDB) is a continually refined and updated, computerized inventory of location information on California's rarest plant, animals, and natural communities. Established in California in 1979, it is part of the nationwide Natural Heritage Network created by The Nature Conservancy.

The NDDDB collects data from a wide variety of sources and uses state-of-the-art computer mapping technology to then make this information available in a standardized text and graphic format. Clients include government agencies, consultants, city and county planners and conservation groups. The NDDDB is one of California's most valuable conservation tools, providing information essential to effective resource management and wise land-use decisions.

Information is available from the NDDDB in three formats: text reports, graphic overlays for USGS topographic maps, and a PC application called RareFind 2. RareFind 2 contains all of the text information contained in the NDDDB. Users can customize their queries and create customized reports. It can be used alone or linked with the GIS application *ArcView*, for even greater flexibility.

To order any NDDDB product contact our Information Services staff at 916 324-3812.

RareFind 2

The most complete computerized inventory of California's rarest species and natural communities available!

RareFind 2 contains over 35,000 records on more than 3,000 rare native plants, animals, and natural communities in a convenient, searchable database. Offering all textual data associated with the Department of Fish and Game's Natural Diversity Database, *RareFind 2* can either be used as a stand-alone research tool or linked with the GIS application *ArcView* for even greater flexibility.

RareFind 2 has many improvement over the previous version of *RareFind*. These include features that allow users to query on many fields at once, improved on-screen viewing capabilities, both standard and custom report-writing, and a bibliography of all sources used for each element occurrence.
